## SUMMARY

Computer Science (AI & ML) graduate specializing in full-stack web development and applied machine learning, with a project on constraint-based scheduling systems. Builds end-to-end web applications with proficiency in React frontends, Node.js/Express REST backends, and ML-based applications, with a strong foundation in DSA, OOP, and DBMS.

## EDUCATION

|                                                                           |                              |
|---------------------------------------------------------------------------|------------------------------|
| KCC Institute of Technology and Management (AKTU)                         | 2022 – 2026                  |
| Bachelor of Technology, Computer Science Engineering (AI & ML); CGPA: 7.8 | Greater Noida, Uttar Pradesh |
| Bal Vidyalaya Madhyamik School (CBSE)                                     | 2019-2022                    |
| 10 <sup>th</sup> / 12 <sup>th</sup> Grade; Percentage – 75% / 78%         | Varanasi, Uttar Pradesh      |

## ACADEMIC PROJECT

### Smart Timetable Generator for Institutions

2026

React.js, Node.js, Express.js, MongoDB, JWT

[GitHub](#) | [Live Demo](#)

- Engineered a web-based automated scheduling system managing 50+ faculty timetables, reducing manual scheduling effort by approximately 80% through constraint-based slot allocation.
- Architected a full-stack MERN application with an Express.js REST backend and a React.js interface for schedule generation, faculty assignment, and timetable visualization.
- Implemented leave management, substitution planning, and workload-balancing modules to automatically redistribute periods when faculty are unavailable.
- Secured multi-role access using JWT authentication with role-based authorization separating administrator and faculty permissions.
- Authored and published a research paper on the system's design and implementation in the IJRES Journal (Feb 2026).

## TECHNICAL PROJECTS

### Synapse — Technical Discourse & Social Platform

[GitHub](#) | [Live Demo](#)

HTML5, CSS3, JavaScript, Bootstrap 5

- Developed a developer-focused social platform supporting technical signals, syntax-highlighted code blocks, interactive polls, and threaded replies.
- Built a mobile-first, tactile dark layout using Bootstrap 5's grid system and CSS variables, featuring a horizontal spotlight reel and persistent theme toggling.
- Implemented a modular client-side state store in vanilla JavaScript with Local Storage persistence to handle real-time posts, voting, and bookmarks without page reloads.

### SMS Spam Classifier --- To Detect the Spam/Ham SMS's

[GitHub](#) | [Live Demo](#)

Python, Streamlit, Scikit-Learn, NLTK, Pickle

- Built an end-to-end NLP pipeline using Tokenization, Stopword removal, Porter Stemming with TF-IDF vectorizer for feature extraction.
- Trained a Multinomial Naïve Bayes classifier on SMS spam collection dataset (5575 messages), optimizing performance for high dimensional sparse text.
- Deployed the trained model and vectorizer via Pickle serialization on a Streamlit interface, Enabling real-time spam classification with sub second latency.

## TECHNICAL SKILLS

- Languages: Java, Python, C, JavaScript, SQL, HTML5/CSS3
- Frameworks & Libraries: React.js, Node.js, Express.js, Bootstrap, Streamlit, Scikit-Learn
- Databases & Tools: MongoDB, MySQL, Git/GitHub, VS Code, MS Excel, Anaconda, Jupyter Notebook
- AI/ML: Machine Learning Fundamentals, Python for AI, Data Handling & Pre-processing, EDA
- Core Concepts: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks, REST API Design, JWT Authentication

## CERTIFICATIONS & ACHIEVEMENTS

- Research Publication, IJRES Journal (Feb 2026) — Published paper on Smart Timetable Generator for Institutions. ([Link](#))
- Java Web Development with AI, HCLTech (Mar 2025). ([Link](#))
- Led project planning, task allocation, and coordination for a multi-member academic software development team.
